1. Wprowadzenie. 2. Nowa klasyfikacja i opis taksonów chlamydii. 3. Podsumowanie

The recent data in systematic of *Chlamydia*

Abstract: The employed till now *Chlamydia* systematics was based on phenotypic, morphologic, antigenic and genetic traits. New investigative techniques permitted to differentiate and to better recognise microbes of *Chlamydiales* order and to create a new systematics. The new classification demonstrated that the *Chlamydiales* order includes four families (*Chlamydiaceae*, *Parachlamydiaceae*, *Simkaniaceae*, *Waddliaceae*). Familia *Chlamydiaceae* has been represented by *Chlamydia* and *Chlamydophila*, *Parachlamydiaceae* — *Parachlamydia* i *Neochlamydia*, *Simkaniaceae* — *Simkania*, *Waddliaceae* has been represented by *Waddlia*.

1. Introduction. 2. New classification description of chlamydial taxons. 3. Summary
